Self-cleaning coatings and/or surfaces have attracted great attention for photovoltaic (PV) panel and building window glass applications. In this work, we have developed TiO₂-SiO₂-PAA ...

Say goodbye to metal corrosion with high-strength composite materials/engineering plastics, offering acid and alkali resistance, anti-aging properties, and a lifespan extended by 3 times or more.

Specializing in photovoltaic recycling systems since 2012, we provide turnkey solutions for solar farms and recycling centers. Our scrapers achieve 96.7% material purity with energy-efficient operations.

This study offers important insights for policymakers, industry stakeholders, and researchers focused on enhancing circularity and sustainability within the photovoltaic sector.

In summary, the sulfuric acid-ferric sulfate leaching system presents a viable, environmentally friendly alternative to conventional nitric acid-based methods, offering significant ...

But enter the photovoltaic carbon fiber scraper, and suddenly we're talking about a tool that's part spaceship tech, part industrial workhorse. These aren't your daddy's paint scrapers; they're self ...

By combining the advantages of base and acid catalysis, we have successfully synthesized a transparent, weather-resistant self-cleaning anti-reflective coating.

A TiO₂ passivation layer is introduced on the ZnO NAs surface to enhance acid resistance and mitigate corrosion caused by acidic rainwater. Fluoroalkylsilane (POTS) modification achieves ...

CVD-based surface treatment is suitable for preparing photovoltaic self-cleaning surfaces. These methods prepare self-cleaning surfaces by reacting gaseous substances with hot surfaces ...

Therefore, the market urgently needs to develop a new type of self-cleaning and acid-resistant nano protective

Acid-resistant photovoltaic scraper

coating product for photovoltaic glass to solve the above problems.
