Prices of lithium in China are close to a record high as a power crisis in the nation's major hub for the vital electric-vehicle battery ingredient threatens an already-tight market.

Africa has become the epicenter of an intensifying global competition for critical minerals, as countries scramble to secure supply chains for the materials required to power the energy transition.

China has a virtual monopoly on lithium extraction in Africa. More than four-fifths, or 83%, of Africa's forecast lithium supply this decade will come from projects at least partly owned by ...

For now, Africa will rely on Chinese investments to grow its lithium sector, making effective negotiation with Chinese interests essential for maximising its potential and influencing the global ...

The updated results demonstrate that economically strong regions such as China, Europe and the USA leverage their capital power to significantly increase their influence across the supply ...

China imported 20% of the world's processed battery minerals in 2023, made up of mainly cobalt from Africa. That same year, China exported 58% of the world's processed battery ...

This article explores how China-Africa partnerships in lithium-ion battery enterprises are reshaping energy access, industrial growth, and sustainable development across Africa.

While Australia, Chile, and China are expected to account for about 70% of total lithium supply this year, the rise of African mines will reduce their combined share to just over half by the end of the decade, ...

With the global shift to electric vehicles (EVs) accelerating, China is cementing its dominance over the lithium supply chain by pouring investment into African mines, creating a new ...

China-africa lithium energy storage power supply sales

The perfect storm of RMB appreciation, cell price hikes, and export tax cuts is forcing Chinese lithium battery exporters to rethink their Africa strategy. But as history shows, crises...
