Solar energy is the fastest growing and most affordable source of new electricity in America. As the cost of solar energy systems dropped significantly, more Americans and businesses ...

NASA's Parker Solar Probe has made history by completing its closest-ever approach to the Sun, a monumental achievement in space exploration. On December 24, the spacecraft passed ...

Icarus may be known in Greek mythology as the one who flew too close to the sun. But today, it's NASA's Parker Solar Probe that turned the daring journey into reality. On Christmas Eve, ...

Breaking its previous record by flying just 3.8 million miles above ...

Icarus may be known in Greek mythology as the one who flew ...

NASA has confirmed that its Parker Solar Probe is safe and fully operational after its Christmas Eve close encounter with the Sun. On December 24, 2024, the robotic probe came within ...

We find that, due to technological trajectories set in motion by past policy, a global irreversible solar tipping point may have passed where solar energy gradually comes to dominate ...

Breaking its previous record by flying just 3.8 million miles above the surface of the Sun, NASA's Parker Solar Probe hurtled through the solar atmosphere at a blazing 430,000 miles per ...

NASA's Parker Solar Probe achieved the closest-ever approach to the Sun, revealing groundbreaking discoveries about the Sun's mysterious corona and solar wind.

Small photovoltaic cells that operate on sunlight or artificial light have found major use in low-power applications--for example, as power sources for calculators and watches.

Close encounter with solar power generation

Solar power, also known as solar electricity, is the conversion of energy from sunlight into electricity, either directly using photovoltaics (PV) or indirectly using concentrated solar power.

By traveling closer to the Sun than any previous spacecraft, the Probe is set to gather crucial data that will help us understand the solar wind and high-energy particles emitted by the Sun. ...
