Germany has accelerated its renewables deployment, with solar growing at a record pace. Wind, though currently lagging, is expected to gain momentum in the future. From January to ...

Wind power is a major source of electricity in Germany and the Energiewende (German for "energy turnaround") that has phased out nuclear power in 2023. Domestic generation is about 60% ...

Britain, Germany, Denmark and other European countries will sign a clean energy pact at a summit in Hamburg on Monday, pledging to deliver 100 gigawatts (GW) of offshore wind power ...

Germany's onshore wind sector is experiencing a remarkable upswing in 2025, with record figures for new installations, project approvals, and tenders in the first half of the year.

Without wind or solar energy, the only realistic option for power generation in Germany "is fossil fuels," he told DW. Burning fossil fuels for heating and industry are key causes of the rising ...

Germany Approves Record Number of Wind Energy Turbines In 2024, German authorities granted permission to construct more than 2400 land-based wind turbines - more than ...

In 2023, land-based wind energy in Germany was the most important power source: 22.9% of the provided gross electricity generation stemmed from onshore wind turbines, totalling 61 GW of ...

Some politicians would prefer a return to nuclear power, but Germany's wind sector is on track to make significant gains.

Germany's onshore wind power sector recorded its strongest half-year since 2017, but the expansion still falls short of the legally mandated targets, the BWE wind power lobby said on...

Germany looks set to exceed its 2030 onshore wind power target by 2.6 percent, according to an analysis by

Germany will fully generate wind power

Overview World leader in wind power capacity Onshore wind power Offshore wind power Government support Public opinion Repowering See also Wind power is a major source of electricity in Germany and the Energiewende (German for "energy turnaround") that has phased out nuclear power in 2023. Domestic generation is about 60% renewable, half of that coming from wind. About a third of Germany's total electricity production in 2024 was generated through wind power, up from 6.2% in 2010 and 1.6% in 2000. In 2024, wind power produced ...
