Picture this: GridStor energy storage systems are like shock-absorbing cushions for our power grid, catching renewable energy surges and preventing blackouts when demand spikes.

Gridstor, a developer of standalone battery energy storage system (BESS) assets, has acquired a 450MW/900MWh project in Texas, US, the company's first in the booming ERCOT market.

Grid-scale battery storage installations have become increasingly common across the country -- over six gigawatts were added to the grid in 2023. But GridStor's innovation wasn't in the ...

The Goldman Sachs-backed developer has acquired 450 MW/1.5 GWh of battery energy storage system (BESS) capacity across three US projects since mid January.

GridStor develops and operates battery facilities directly integrated with American power infrastructure, storing electricity to deliver when it is most needed.

GridStor develops, acquires, and operates utility-scale, standalone battery storage projects aimed at strengthening grid reliability and delivering electricity when and where it is needed ...

US energy storage developer Gridstor has announced the start of construction of its first project, a 60MW/160MWh battery energy storage system (BESS) in California.

The GridStor commitment. Each of us needs reliable electricity more than ever to heat and cool our homes, run our businesses, and communicate with each other. GridStor develops, ...

About us GridStor develops, constructs, and operates battery energy storage projects that improve grid reliability and power economic growth across North America.
