This isn't just pouring cement; it's a hands-on process of building the anchors that will hold renewable energy systems firmly to the ground for decades. The video opens in a sunlit workshop.

Concrete blocks are a new solution for quick and non-invasive installation of photovoltaic panels on flat roofs. With a weight of 46 kg, no additional load is necessary. Simply place them on the roof at the ...

Concrete foundations for solar panels are a common type of solar system support structure used in solar installations, with a variety of design and construction methods for different ...

A solar ballast is a mount for solar arrays made from concrete blocks. Traditionally, solar panel and array installations require attaching mounts directly to a home's roof or the ground by drilling and cutting into it. Alternatively, solar ballasts secure the array to a building's roof or the ground without requiring holes to penetrate the surfaces...
