Which alum smelter has more value for Indonesia's economy?

more value for the economy. First, IEEFA notes that Indonesian 2021 aluminum demand totaled 350kt, while current aluminum capacity comes from a 250ktpa smelter operated by PT Indonesia Asahan Aluminium (Inalum).²² Adaro has noted that 2025 Indonesian alum

Why is Indonesian alumina so expensive?

Indonesian alumina is typically priced at a premium to Australian material on an FOB basis primarily due to the relative proximity to major destinations, leading to comparative freight savings. Other aluminum smelter projects that are currently operating in Indonesia include the PT Inalum and PT Hua Chin smelters.

How much alumina will Indonesia produce in 5 years?

Assuming all 11 alumina refineries open on schedule, total Indonesia alumina capacity could reach 16 million tonnes in the next 5 years. PT Borneo smelter grade alumina refinery (SGAR) project makes this all the more feasible, with the refinery estimated to produce around 1 million tonnes of alumina.

How many alumina refineries will open in Indonesia next year?

Another seven alumina refineries are due to come online next year to bring an additional 9 million tonnes of alumina capacity online. Assuming all 11 alumina refineries open on schedule, total Indonesia alumina capacity could reach 16 million tonnes in the next 5 years.

LONDON - Chinese tycoons are turbocharging Indonesia's aluminium industry with multibillion-dollar projects that rival the vast bets made on the country's nickel riches roughly a ...

Most of the aluminum produced in the early stage would be meant for the export market. The second and third phase of the project could utilize a mix of renewable energy and coal power for ...

Indonesia's alumina and aluminum industry is entering a decisive expansion phase, underpinned by structural demand growth and an accelerating pipeline of downstream projects. ...

However, the project has yet to be realised due to high electricity costs and limited access to low-carbon energy, essential for producing green aluminium. As a leading aluminium ...

Adaro's Phase 1 aluminum smelter will have a supporting 1,100 megawatt (MW) coal-fired captive power plant to supply energy. Total capital expenditure of the project is US\$2 billion. ...

A-STEAM: Energy storage and decarbonisation through aluminium The A-STEAM project now focuses on aluminium as a potential alternative energy source. The research project, led by Professor ...

Oriental Hope Group has established a Southeast Asian company and plans to build a super-large circular industrial base in Indonesia in three phases, with an annual production capacity ...

REPUBLIKA .ID, JAKARTA -- Indonesia to achieve its target in aluminum self-sufficiency. Amid rising domestic demand for aluminum as a strategic material to support the growth ...

The Smelter Grade Alumina Refinery in Mempawah is a strategic project carried out collaboratively by INALUM and PT ANTAM Tbk through INALUM's subsidiary, namely PT Borneo ...

Aluminium's light-weight appeal and increased usage among leading automotive producers, especially on the low-carbon aluminium front, has gained significant traction and looks set ...
