Explore the top 13 largest wind farms in the world by capacity, with key facts, stats, and global clean energy insights.

The worldwide total cumulative installed electricity generation capacity from wind power has increased rapidly since the start of the third millennium, and as of the end of 2023, it amounts to over 1000 GW. Since 2010, more than half of all new wind power was added outside the traditional markets of Europe and North America, mainly driven by the continuing boom in China and India. China alone had over 40% of the world's ca...

Below is a table of wind powered energy plants around the world. The table is listed from largest to smallest. In the right hand column you'll see whether it's an onshore plant or offshore.

Wind power is used on a commercial basis in more than half of all the countries of the world. [3] Denmark produced 58% of its electricity from wind in 2023, a larger share than any other country.

Data in GEO can be edited from anywhere in the world. We invite collaborations to help build GEO.

Data and information about power plants and their location across the globe, plotted on an Interactive world map

The United States Wind Turbine Database (USWTDB) provides the locations of land-based and offshore wind turbines in the United States, corresponding wind project information, and turbine technical ...

The Global Wind Power Tracker (GWPT) is a worldwide dataset of utility-scale, on and offshore wind facilities. It includes wind farm phases with capacities of 10 megawatts (MW) or more.

It contains data about wind farms, turbines, manufacturers, developers, operators, owners and also pictures and cartographical data.

This is a list of the largest onshore wind farms that are currently operational, rated by generating capacity. Also listed are onshore wind farms with notability other than size, and largest proposed ...
