What is the difference between a solar company and a water agency?

A solar company takes the upfront cost responsibility for owning and operating a generating system. They benefit from the solar energy credits. A water agency, on the other hand, pays only for the kilowatt hours of energy used, typically at or below current energy costs. Water agencies cannot take direct advantage of the solar energy credits. The solar company can potentially be cash positive on day one due to these credits, while the water agency does not have this insulation from volatile and rising energy prices.

What is the best procurement method for solar energy?

In the context of water and wastewater utilities, the most popular procurement method is one where a solar company takes the upfront cost responsibility for owning and operating the generating system. The water entity pays only for kilowatt hours, typically at or below current energy costs. This provides insulation from volatile and rising energy prices and can even be cash positive from day one.

Can a public entity procure a solar system from a sole source?

In California, a public entity can procure a solar system from a sole source according to Government Code 4217. This approach offers several advantages: faster project completion, which results in quicker realization of savings value, and avoidance of possible loss of available incentives, even without running the RFP process and obtaining a competitive quote.

Can a community solar system save you money?

If your home is not suitable for rooftop solar or if you rent your home or apartment, you can save money by subscribing to a community solar system. By subscribing to a community solar project, you can get credit on your electric bill for the solar energy generated at a solar farm.

We are providing a general overview of the options that municipalities have to develop renewable energy facilities and the specific approach of the Grafton Water District

Implementation of the project through a solar power purchase agreement (Solar PPA) would likely be financially beneficial to DC Water. The Solar PPA provider would finance, design and construct the ...
