The "renewables" column indicates the percent of that country's electric generation that was renewable. Links for each location go to the relevant electricity market page, when available.

Three of the top countries in terms of total capacity - Germany, Spain, and the UK - were also among the world leaders in percentage of domestic generation from wind and solar at ...

This dashboard ranks countries/areas to their renewable energy power capacity or electricity generation. The data can be further refined based on region, technology or year of interest.

Which countries have the most wind and solar power? Australia, like many countries around the world, is relying mostly on a combination of wind, solar and storage (like batteries and ...

This ranking tracks the share of electricity generated from renewable sources (hydro, wind, solar, bioenergy and other renewables) as a percentage of a country's total electricity generation.

Wind energy Wind energy generation This interactive chart shows the amount of energy generated from wind each year. This includes both onshore and offshore wind farms. Wind generation at scale - ...

China continues to dominate the global renewable energy market, with an overwhelming 1,889 GW of installed renewable capacity as of the end of 2024, representing 64% of additional global...

In a new monthly column for pv magazine, the International Solar Energy Society (ISES) reveals that Sweden, Australia, Netherlands, Germany and Denmark are the leading countries for ...

Wind and solar are on the rise worldwide -- here are the 10 countries that rely on the clean-energy sources most for their electricity. All of these countries used wind and solar to produce ...

Solar and wind power generation system ranking

Wind power and its synonym wind energy are terms that refer to electricity that has been generated by harnessing the power of wind, as opposed to other methods such as solar panels or the burning of ...
