China's solar energy production is reaching simply staggering levels, dragging energy costs down around the globe.

But while it's building clean power capacity, Vietnam is also ramping up use of coal. That's partly to make up for lost hydropower capacity due to drought, and also to meet soaring ...

China installed a record 315 GW (AC) of new solar capacity in 2025, lifting cumulative installed PV capacity to 1.2 TW and pushing non-fossil power sources past thermal generation for the ...

Vietnam's solar boom was built on three key pillars: foreign direct investment (FDI) (mostly from China), access to subsidised Chinese inputs, and productivity spillovers from ...

Vietnam's solar power industry has grown rapidly since 2017, driven by generous feed-in tariffs and strong government support. The country now has one of the highest installed solar ...

Cecilia Han Springer, senior researcher with the Global China Initiative at Boston University's Global Development Policy Center, expects that Chinese companies will become more ...

Although there are signs of a lull in the current trend, the country boasts the largest installed capacity for solar power generation in ASEAN. The pace of new PV installation in Vietnam ...

Vietnam's new energy policy not only charts a path for the country's energy transition but also creates new opportunities for enhanced China-Vietnam cooperation in the realm of green energy.

Solar energy is another key area of cooperation between China and Vietnam. Both countries enjoy ample sunshine, making solar power a viable and attractive option for clean energy ...

Solar power generation in China and Vietnam

Thousands of new jobs are being created in solar panel installation, maintenance engineering, and solar component manufacturing. In many rural areas, solar energy projects are ...
