Is solar power a real thing in Finland?

Many Finns are already familiar with solar power: solar panels can be found on the roofs of many homes, summer cottages and workplaces. As technology develops, industrial-scale solar power production is also becoming more common in Finland. Finland is undergoing a major energy transition.

Why is industrial-scale solar power production becoming more common in Finland?

As technology develops, industrial-scale solar power production is also becoming more common in Finland. Finland is undergoing a major energy transition. Moving away from imported fossil fuels and towards local, clean energy production will create the basis for new industrial investment.

Does Finland need wind power?

In addition to wind power, we also need plenty of solar energy, for which Finland has excellent prospects. Solar power is particularly well suited as a counterpart to wind power. These two emission-free energy sources complement each other: solar energy is available in summer and during the day, while the highest winds occur on average in winter.

How will a hybrid energy system work in Finland?

In Finland, a number of hybrid projects are in the pipeline, combining wind, solar and also energy storage. These solutions will balance our energy system. On a global scale, solar power is one of the fastest growing forms of energy generation - its size and importance in the world's energy mix is huge, larger than wind power.

Visit an innovative northern Finnish ecovillage that produces its own electricity outside the national power grid.

Solar energy is available in Finland also during the winter. Fa&#231;ade installations work well in the Nordic countries because the sun is very low and vertical installations don't gather snow.

A solar generator is a portable generator that usually works along with solar panels. It typically acts as an automatic backup battery to power your home and your household appliances ...

About solar power in Finland Many Finns are already familiar with solar power: solar panels can be found on

the roofs of many homes, summer cottages and workplaces. As technology develops, ...

When people think off-grid in Finland, they usually imagine a summer cottage without running water, no plumbing, and minimal, if any, electrical power available. Over a decade and a half ...

Solar power in Finland is contributing to the transition towards low-emission energy production. Technological development, falling costs and climate goals have together accelerated ...

Leading Finnish landlord SATO is installing solar power at 35 rental properties and expanding EV charging to advance its 2030 carbon neutrality goals.

Rent a panel from a solar power plant Become a solar electricity producer and rent a panel from our solar power plant. We offer you an easy way to influence the amount of renewable energy in Finland: ...

Solar energy is rapidly gaining ground in Finland. Photovoltaic (PV) systems are no longer limited to single-family homes, today they are increasingly installed in apartment buildings, ...
