Introduce power to any location with our Solar Energy Container. It's a transportable, fast-to-deploy source of green energy, housed in a standard-sized container for global mobility. Set on hydraulic ...

"super" object has no attribute "__sklearn_tags__". This occurs when I invoke the fit method on the RandomizedSearchCV object. I suspect it could be related to compatibility issues ...

The implicit `__class__` used by `super` does not exist at this point. Thus, referencing the superclass by the hardcoded name, as one had to do prior to `super` in Python2 will work - and is the ...

In fact, multiple inheritance is the only case where `super()` is of any use. I would not recommend using it with classes using linear inheritance, where it's just useless overhead.

`super()` lets you avoid referring to the base class explicitly, which can be nice. But the main advantage comes with multiple inheritance, where all sorts of fun stuff can happen.

As for chaining `super::super`, as I mentioned in the question, I have still to find an interesting use to that. For now, I only see it as a hack, but it was worth mentioning, if only for the differences with Java ...

Discover the world's leading foldable solar container with 40% higher energy density. Solarfold(TM) by Sunmaygo offers quick deployment & 70% lower costs than diesel.

A diretiva `super`, sem parânteses, permite ainda invocar métodos da classe que foi derivada através da seguinte syntax. `super.metodo()`; Isto é útil nos casos em que faz override ...

I wrote the following code. When I try to run it as at the end of the file I get this stacktrace: `AttributeError: "super" object has no attribute do_something class Parent: def __init__(self):...`

Super large mobile solar container outdoor power

These rugged, self-contained systems integrate large solar arrays, advanced battery storage, and high-capacity fuel cells -- with optional diesel redundancy when regulatory or client requirements demand it.

We offer two types of solar containers that differ in design and power output. Besides our flagship, auto-foldable container, we also offer the manual version of this unit.

super() is a special use of the super keyword where you call a parameterless parent constructor. In general, the super keyword can be used to call overridden methods, access hidden ...
