Supercapacitors represent a transformative energy storage technology, bridging the gap between conventional capacitors and batteries through their exceptional power density, rapid ...

The study investigated a hybrid power system connected to the grid, integrating wind and photovoltaic (PV) energy sources with a hybrid storage system using batteries and a supercapacitor.

Abstract: This paper focuses on the simulation of a Dual Active Bridge converter (DAB) by applying an open-loop and closed-loop Proportional, Integral and Derivative (PID) control strategy during the ...

The explosion of chargeable automobiles such as EVs has boosted the need for advanced and efficient energy storage solutions. Battery-supercapacitor HESS has been introduced to meet ...

Development of a PID Control for a Supercapacitor-Based Energy Storage System Using a Dual Active Bridge (DAB) Converter

This study designs a robust fractional-order PID control (RFOPID) strategy of supercapacitor energy storage systems (SCES). At first, the nonlinearities, unmodelled dynamics and parameter ...

Various control strategies for SCES have been proposed, but they have limitations. This paper aims to develop a novel robust fractional - order PID (RFOPID) control approach for SCES ...

This paper presents an approach to designing a supercapacitor (SC) module according to defined power profiles and providing a control algorithm for sharing the energy from the SC ...
