Transistor inverters, which were originally utilized for energy-saving purposes in fans and pumps, are now being used more widely in factory automation equipment and industrial machinery.

Inverter technology has come a long way since it was first developed in the 1950s. Today, inverters are widely used across multiple industries including power generation, renewable energy, ...

In 1991, Germany's SMA developed and produced the first inverter with its excellent power electronics technology. The prosperity of the European photovoltaic market in the early 21st century ...

Although inverters as a concept existed earlier, the naming and specific development can be traced back to Prince's work. He was not the first to create a device that could convert DC to ...

SMA Solar Technology (Germany): Founded in 1981, SMA became one of the first major manufacturers of grid-tied inverters. Their work in the 1990s and early 2000s set the standard for residential and ...

Inverters first made their appearance in the late 19th century and their development continued through the middle of the 20th century. The year 2000 brought the advent of residential ...

Rectifier Circuits are bridge circuits. The "Graetz" circuit (Leo Graetz, 1897) was developed nearly 30 years prior to Prince's inverter. The Graetz circuit was associated with Nodon (electrolytic) rectifier ...

Nikola Tesla, a Serbian-American inventor, electrical engineer, mechanical engineer, physicist, and futurist, is credited with discovering the inverter. SMA Solar Technology (Germany) ...

1995 marked the birth of our first photovoltaic inverter - the Fronius Sunrise. Further milestones were reached with the IG inverters, which were available from 2001 to 2007. We brought a revolutionary ...

The earliest inverter manufacturer

The very first inverters were created using motor-generators as a way of creating AC electricity during World War 2. Redi-line was one of the first and most popular brands at the time.
