---

When portable electronic devices powered by lithium batteries are in checked baggage, they must be completely powered off and protected to prevent unintentional activation or damage.

Always follow local fire authority guidance. The terminals of the lithium battery is live when the battery is switched on or in the event of an internal fault. Do not place metallic objects or tools on top of the ...

Just add a switch between the battery and everything else, besides charging cables for example. Or just solder separate cables for charging with a plug.

Is it ok to tie the battery pack (in my case 3s1p) to a SPST switch to turn it on/off or I should need a series resistor after the switch to limit current and a big fat cap to smooth the on/off ...

Bring big backup power with you with these expert ...

When lithium batteries fail to operate safely or are damaged, they may present a fire and/or explosion hazard. Damage from improper use, storage, or charging may also cause lithium batteries to fail.

Overcharge protection is built into most power stations and battery-powered devices. However, if you leave your power station plugged in all the time, you will ultimately affect its battery...

Attach a circuit breaker to the battery's positive (+) terminal, but keep it in the OFF position. Connect the battery's negative (-) terminal to the MPPT controller's "BAT-" port. Connect the battery's positive (+) ...

To use power solely from the power pack, should we then have our Victron Multiplus inverter turned to "On" or switched "Off"? (We understand it should not be turned to "Charging", ...

**LONG LASTING ENDURANCE:** The Explorer 500 portable power station is built with the lithium-ion
