## Which power supply should I Choose?

For applications where you require a lower profile (depth), then our SPM series is the perfect choice. They are available up to 100 W and represent our highest power class 2 supply (91 W). When space is at a premium, yet performance must not be sacrificed, the SPP Enclosed chassis-mounted power supply, an extremely compact series, is your choice.

## What is a good universal power supply?

STM MLC70 is one of the most compact universal power supplies, capable of delivering an output power of up to 70 W. It comes with an adapter featuring a USB Type-C connector, allowing you to charge not only laptops but also any compatible electronics and peripherals.

## How much power does a portable power station need?

Small devices like a laptop and coolers tend to need around 60 to 100W of continuous power whereas appliances like fridges can need up to around 800W. So, a large portable power station with a higher output is best for powering large devices, or more devices at once.

## How long can a portable power station run?

It all depends on the power station and the device or devices you're charging. As a general rule of thumb, to figure out how long your portable power station can run, divide battery capacity (Wh) by power drawn by the device (W). What is UPS and why do I need it?
