Who discovered solar energy?

In 1839, French scientist Edmond Becquerel discovered the photovoltaic effect, which demonstrated that certain materials can produce an electric current when exposed to light. This was a brief history of solar energy. Who invented the first solar panels?

How did solar energy grow in the late 2000s?

The late 2000s was a crucial time for the growth of solar energy. Global investment in clean energy exceeds \$100 billion, with solar energy as the leading clean energy technology for venture capital and private equity investment. The solar tax credit helped to create unprecedented growth in the U.S. solar industry from 2006 to 2007.

What is the history of solar energy?

From the earliest days of solar-powered satellites to modern rooftop arrays and utility-scale solar farms, this is the complete history of solar energy--and a look at its exciting potential in the years to come. The story of solar energy begins in 1839 with the work of French physicist Edmond Becquerel.

How did the 1970s change solar energy?

The 1970s energy crisis transformed solar energy from an expensive novelty into a serious alternative to fossil fuels. Government support and rising oil prices created new opportunities for solar technology development. The 1973 oil embargo quadrupled gasoline prices and created widespread energy shortages.
